DETAILED ACTION

Specification

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Allowable Subject Matter

Claims 1-7 are allowable.

The following is an examiner's statement of reasons for allowance: Claims 1-7 are allowed over the prior art of record. The prior art fails to teach or suggest a circuit for bus hold circuit with power down and over voltage tolerance that implement a technique of utilizing an arbiter circuit arranged to selectively connect the more positive of Vin or Vcc to a pseudo power rail or prail and arranging a PMOS transistor when on to connect the power connection to Vcc and when off to disconnect second inverter from Vcc, thereby allowing the power connection to float, and where the PMOS N-well is connected to the prail, thereby preventing the PMOS drain to N-well from being forward biased.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Cited References

The prior art made of record and not replied upon is considered pertinent to application's disclosures. The cited references relate to bus hold circuit with voltage tolerance.
